

## Local education programs on climate

The Women University of Azad Jammu and Kashmir (WUAJ&K) Bagh is taking various steps to promote climate awareness among the community through educational programs. The university has organized several programs focused on climate change. These programs include mentorship programs, training sessions, and access to university facilities.

### Planting and Crafting Workshop

**Objective:** Foster climate resilience through sustainable planting and eco-friendly crafting. Participants can learn about native plants that support local ecosystems and carbon sequestration.

**Activities:**

- Hands-on planting of drought-resistant and native species.
- Crafting items from biodegradable or recycled materials reduces waste and promotes sustainability.

**Impact:** Enhances community knowledge of biodiversity and its role in combating climate change. **(Annex. I)**

### Water Resource Management Workshop

**Objective:** Educate the community on sustainable water practices to mitigate climate impacts. Understanding water conservation is crucial as climate change leads to altered rainfall patterns and water scarcity.

**Activities:**

- Training on efficient irrigation techniques and rainwater harvesting systems.
- Discussions on the effects of climate change on local water resources.

**Impact:** Empower participants to implement water-saving measures, enhancing resilience to climate-related water challenges. **(Annex. II)**

## Kitchen Gardening Workshop

**Objective:** Promote local food production and sustainable practices to reduce carbon footprints. Growing food locally decreases reliance on transportation, contributing to greenhouse gas emissions.

**Activities:**

- Instruction on organic gardening techniques that preserve soil health and biodiversity.
- Workshops on composting to reduce organic waste and enhance soil fertility.

**Impact:** Participants gain skills to sustain food, fostering self-sufficiency and resilience against climate impacts. **(Annex. III)**

## Sericulture Workshop

**Objective:** Introduce sustainable silk production as a climate-friendly agricultural practice. Sericulture, through the cultivation of mulberry trees, can contribute to sustainable livelihoods while promoting biodiversity.

**Activities:**

- Education on the lifecycle of silkworms and environmentally friendly rearing practices.
- Workshops on creating silk products that emphasize sustainable sourcing.

**Impact:** Participants learn to engage in sustainable agriculture, creating economic opportunities while mitigating climate effects. **(Annex. IV)**
