## 13.4.2 Achieve by date

### Achieve-by-Date: Roadmap Toward Net-Zero Carbon Emissions by 2035

### Long-Term Sustainability Commitment

Women University of Azad Jammu & Kashmir, Bagh, is committed to progressively improving its environmental performance and reducing its carbon footprint through practical, resource-conscious sustainability measures. The University aims to work toward net-zero carbon emissions by 2035 through gradual improvements in energy efficiency, responsible resource use, sustainable transportation, waste management, and campus greening.

Recognizing the financial and infrastructural constraints faced by public-sector universities, WUAJK emphasizes achievable targets, the efficient use of available resources, environmental awareness, and the gradual introduction of improved sustainability practices.

### Conclusion

The sustainability initiatives reported up to 2024 provide a foundation for WUAJK's continued environmental progress. During 2025, the University can build on these efforts through practical energy-saving measures, environmental awareness, responsible waste management, maintenance of campus greenery, and improved record-keeping.

The proposed milestones prioritize gradual and affordable improvements suited to the University's institutional context. By reviewing progress annually, documenting implemented activities, and expanding initiatives as resources permit, WUAJK can strengthen its contribution to environmental sustainability and work progressively toward its long-term 2035 net-zero ambition.
